Summary

I am looking for a summer internship in data science or software engineering. Currently, I am an undergraduate at Georgia Tech, interested in machine learning and algorithms.

Education

Georgia Tech (2017 – present): Undergraduate Computer Science major.

Skills

Web technologies: HTML5, CSS3, JS, Node, Express, React

Machine Learning technologies: Tensorflow, Keras, Azure ML Studio

Programming languages: Java, Python, C++, Javascript

Courses taken: Machine Learning (Coursera), Deep Learning Specialization (Coursera)

Fall 2017: Object-Oriented Programming, Foundations of Mathematical Proofs, Applied Combinatorics

Spring 2018: Data Struct and Alg, Data Input and Manip, Algorithms Honors, Combinatorial Analysis

Other CS skills: Member of the GT Programming Team (Participated in the 2017 ACM ICPC).

Experience

Machine Learning Researcher – Interactive Optimization and Learning (IOL) Lab Jan 2018 – Present

Working with other Master's students on adversarial learning under the advisement of Professor Sebastian Pokutta. Focusing on training random forests to be more robust to adversarial examples by iteratively adding adversarial examples to the train set and training the classifier, an alternative to standard boosting algorithms.

Microsoft Student Partner (MSP) – Microsoft

Sept 2017 – Present

Works as a technical evangelist at Georgia Tech. Attends training sessions by Microsoft and hosts workshops using Azure and tools like LUIS (Language Understanding Intelligent Service) and ML Studio every month.

Project Lead – Data Science at GT

Oct 2017 – Dec 2017

Lead a team in the Kaggle project *WDSM - KKBox Churn Prediction Challenge* to forecast whether users of a music streaming service will stop their subscription. <https://github.com/arvindr9/kkbox-churn-prediction>

Web Developer – GT Bits of Good

Sept 2017 – Dec 2017

Used Wordpress to redesign the website for the nonprofit World Water Relief. Additionally worked on mini-projects using MERN Stack Web Development (MongoDB, Express, React, Node).

Projects

Visual Question Answering (VQA) Mobile App

Jan 2018 - Present

Currently using Tensorflow to allow a program to process a question about an image and return an answer. The mobile app is Kotlin-powered. This project is done with a team in GT Agency (the AI club).

Home Depot Deep Learning Challenge

Nov 2017

Created a ConvNet using Tensorflow to classify images of shopping products.

<https://github.com/arvindr9/Home-Depot-Challenge>

WeLocate

October 2017

Built a website that allows users to choose a location on a map to find where to open their business based on a dataset of existing buildings from Yelp's API and results from Amazon's AWS Machine Learning. Used Node.js for the backend and for calling the Python scripts to obtain and train the datasets. Received awards for the Most Disruptive Hack and the Best Financial Hack. <https://devpost.com/software/welocate-7mjhra>

Other Skills/Interests

Mathematics: Represented Georgia ARML in 2015 and 2017. Experienced in combinatorics and number theory. Developed problem solving skills from math contests. Took the Putnam Exam in December 2017.

Violin: Member of the Atlanta Symphony Youth Orchestra (Fall 2016- Spring 17), Georgia All-State Orchestra (2015, 16, 17), Georgia Tech Symphony Orchestra (Fall 2017 - Present)
