Summary

I am looking for a summer internship in data science or software engineering. Currently, I am an undergraduate at Georgia Tech, interested in machine learning and algorithms.

Education

Georgia Tech (2017 – present): Undergraduate Computer Science major.

Skills

Web technologies: HTML5, CSS3, JS, Node, Express, React

Machine Learning technologies: Tensorflow, Keras, Azure ML Studio, Numpy

Programming languages: Java, Python, C++, Javascript, MATLAB

Courses taken: Coursera: Machine Learning, Deep Learning Specialization. Georgia Tech:

Fall 2017: OOP, Spring 2018: Data Struct and Alg, Data Input and Manip, Algorithms Honors

Other CS skills: Member of the GT Programming Team (Competitive programming in C++)

Experience

Machine Learning Researcher – Interactive Optimization and Learning (IOL) Lab Jan 2018 – Present

Working with graduate students, PhD students and Georgia Tech Professor Sebastian Pokutta on real-world Machine Learning projects

Microsoft Student Partner (MSP) – Microsoft

Sept 2017 – Present

Works as a technical evangelist at Georgia Tech. Attends training sessions by Microsoft and hosts workshops using Azure and tools like LUIS (Language Understanding Intelligent Service) and ML Studio every month.

Project Lead – Data Science at GT

Oct 2017 – Dec 2017

Leading a team in the Kaggle project *WDSM - KKBox Churn Prediction Challenge* to forecast whether a user of the music streaming service KKBox will churn (stop their subscription) within 30 days.

<https://github.com/arvindr9/kkbox-churn-prediction>

Full Stack Web Developer – GT Bits of Good

Sept 2017 – Dec 2017

Used Wordpress to redesign the website for the nonprofit World Water Relief. Additionally worked on mini-projects using MERN Stack Web Development (MongoDB, Express, React, Node).

Projects

ConvNet in Numpy

Nov 2017 - Present

Creating a convolutional neural network to train a digit recognizer based on the MNIST dataset.

<https://github.com/arvindr9/mnist-convnet>

Home Depot Deep Learning Challenge

Nov 2017

Created a ConvNet using Tensorflow to classify images of shopping products.

<https://github.com/arvindr9/Home-Depot-Challenge>

WeLocate

October 2017

Built a website that allows users to choose a location on a map to find where to open their business based on a dataset of existing buildings from Yelp's API and results from Amazon's AWS Machine Learning. Used Node.js for the backend and for calling the Python scripts to obtain and train the datasets. Received awards for the Most Disruptive Hack and the Best Financial Hack. <https://devpost.com/software/welocate-7mjhra>

FiscAlert

October 2017

Created a program at the hackathon HackGT that predicted credit card fraud based on features like time, distance and cost of transactions using anomaly detection with Java. Piped the output of the Java program from a text file through python http.server to a webpage. <https://devpost.com/software/fiscalert>

Other Skills/Interests

Mathematics: Represented Georgia ARML in 2015 and 2017. Experienced in combinatorics and number theory. Developed problem solving skills from math contests. Took the Putnam Exam in December 2017.
